Who we are

E4environment is an environmental consultancy that has been providing professional, practical advice and expertise to both the private and public sector on a wide range of environmental issues since 2000. We pride ourselves on providing a professional, friendly and supportive service, allowing the client to achieve their project aims; comply with legislation; save resources and money; and improve their environmental credentials.

We also offer products that support businesses to enhance and manage their green credentials and legal compliance obligations.

Agricultural Services

You do the farming, we do the form-filling

We understand how daunting it can be to keep the farm running and at the same time, keep up to date with the never ending paperwork. We can offer you a full range of agricultural services to remove the stress, ensure you are compliant and up to date, and enable you to consider new ways to develop your business.

Grants and Funding

With great success and experience, E4environment will help farms identify what funding and grants are available for projects, giving advice and guidance, before taking on the form filling for the application process.

Management systems and Assurance schemes

There is an ever increasing requirement to provide evidence of good practice. This usually means endless paper work comprising risk assessments, plans, procedures and record keeping. If this is a daunting prospect, we can not only provide a paper and electronic system, we can ensure that records are regularly updated, permits renewed and any other reports organised. We can do as much or as little as you need leaving you to do the farming.

Renewables

We offer a comprehensive service, starting from an initial feasibility study/business plan that will give you all the financial, technical and legal information you need to assess whether it is the right choice for your farm. There may also be other cost savings to you, and we can offer advice on claiming Feed in Tariffs (FITs), or the possibility of accessing a grant.

Packaging regulations

Are you a farm business that packages its own products on site? Do you handle more than 50 tonnes of packaging waste and have a turnover of more than £32million? If the answers are yes, you should be aware of the Producer Responsibility Packaging and Waste Regulations. We have nearly 20 years' experience of working in this area and with a wealth of successful projects behind us.

ESOS

At E4environment, we can guide companies through complying with ESOS. We can carry out the appropriate audits and help identify cost effective energy saving methods for you, making it as simple as possible to meet the mandatory reporting requirements.

Environmental Permits

Certain activities require an environmental permit or exemption from the Environment Agency. If you're about to install chicken or pig sheds, or an AD plant you will need to apply for a permit before operating. Certain waste activities also need permits such as accepting rubble for filling in farm tracks. This can be a complex process and requires an understanding of environmental issues. We can advise on the right permit and complete the application on your behalf.

Crop assurance management system for a mixed arable and livestock farm

E4environment put a paper and electronic system in place to support a farmer bogged down with endless paperwork, procedures, risk assessments and record keeping. In addition, we make regular contact to update records and provide reminders where action is required. This has taken the stress out of the inevitable compliance audits.

Energy audit for arable farm with packing plant

E4environment carried out an energy audit to satisfy the requirements of the regulations. The audit also led to a provided a number of solutions to improve efficiency and reduce energy costs.

Agricultural grant for farming equipment

We helped a Shropshire farmer successfully apply for various granted funds to purchase GPS precision farming equipment through the LEADER funding. But also using STEPS funding for pesticide wash down system.
